```
NAME: Steffe, Etic K.

REGISTRATION NUMBER: 36,688
REPERENCE/DOCKET NUMBER: 1488.0310003/EKS/KRM
TELECOMUNICATION INFORMATION:
TELEPHONE: 202-371-2600
ITELEPHONE: 202-371-2540
INFORMATION FOR SEQ ID NO: 4:
SEQUENCE CHARACTERISTICS:
LENGTH: 417 amino acids
TYPE: amino acid
TOPOLOGY: Linear
MOLECULE TYPE: protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 25,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2, Application US/09153927A

Sequence 2, Application US/09153927A

Patent No. 6297022

GENERAL INFORMATION:

APPLICANT: McDonnell, Peter C.

APPLICANT: Young, Peter R.

TITLE OF INVENTION: Antagonists for Tumor Necrosis Related Receptors TR1, TR3

TITLE OF INVENTION: Antagonists for Tumor Necrosis Related Receptors TR1, TR3

TITLE OF INVENTION: Antagonists for Tumor Necrosis Related Receptors TR1, TR3

TITLE OF INVENTION: Antagonists for Tumor Necrosis Related Receptors TR1, TR3

TITLE OF INVENTION: Antagonists for Tumor Necrosis Related Receptors TR1, TR3

TITLE OF INVENTION: Antagonists for Tumor Necrosis Related Receptors TR1, TR3

TITLE OF INVENTION: Antagonists for Tumor Necrosis Related Receptors TR1, TR3

Sequence 762. Application US/09949016
; Sequence 762. Application US/09949016
; Patent No. 681239
; GENERAL INFORMATION:
; APPLICANT: VENTER, J. Craig et al.
; TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
; TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF; FILE REFERENCE: CLOO01307
; CURRENT APPLICATION NUMBER: US/09/949,016
; CURRENT FILING DATE: 2000-04-14
; PRIOR PELLING DATE: 2000-10-20
; PRIOR FILING DATE: 2000-10-03
; PRIOR FILING DATE: 2000-10-03
; PRIOR FILING DATE: 2000-09-08
; NUMBER OF SEQ ID NOS: 207012
; SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 7652
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         90 CTEPCGNSTCLVCPQDTFLAMENHHNSECARCQACDEQASQVALENCSAVADTRCGCKPG 149

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Unior necrosis factor receptor 1 precursor - rat
N;Contains: tumor necrosis factor binding protein 1 (TNF blocking factor)
C;Species: Rattus norvegicus (Norway rat)
C;Date: 30-Jun-1992 #sequence_revision 07-Oct-1994 #text_change 09-Jul-2004
C;Accession: B36555
R;Himmler, A; Maurer-Fogy, I.; Kroenke, M.; Scheurich, P.; Pfizenmaier, K.; Lantz, M.; C
B/Title: Molecular cloning and expression of human and rat tumor necrosis factor recepton
A;Reference number: A36555, MUID:91090841; PMID:1702293

C)Superfamily: nerve growth factor receptor; NGF receptor repeat homology

C)Superfamily: nerve growth factor receptor; NGF receptor repeat homology

C)Keywords: duplication; glycoprotein; heterodimer; monomer; phosphoprotein; receptor; t;

E)1-28 Domain: signal sequence #status predicted <SIG>
F)29-427/Product: nerve growth factor receptor #status experimental <MAT>
F)29-520/Domain: extracellular #status predicted <SET>
F)32-65/Domain: NGF receptor repeat homology <NG3>
F)40-148/Domain: NGF receptor repeat homology <NG3>
F)149-189/Domain: NG5/Domain: NG5/Domain

2: uniprot_trembl:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-1-FUNCTION: Receptor for TNFSF12/APO3L/TWEAK. Interacts directly with the adaptor TRADD. Mediates activation of NF-kappa-B and induces apoptosis. May play a role in regulating lymphocyte homeostasis.
                                                                                                                                                            "A new death receptor 3 isoform: expression in human lymphoid cell lines and non-Hodgkin's lymphomas."; Blochem. Substitution of TNF to the extracellular domain leads to homotrimerization. The aggregated death domains provide a novel molecular interface that interacts specifically with the death domain of TRADD. Various TRADD-interacting proteins such as TRAFS, RIP and possibly FADD, are recruited to the complex by their association with TRADD. This complex activates at least two distinct signaling cascades, apoptosis and NF-kappa-B signaling. Binds BAG4 (By similarity). Constitutively associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PURCE DNA sequences.";

-!- FUNCTION: Receptor for TNFSF2/TNF-alpha and homotrimeric
TNFSF1/Lymphotoxin-alpha. The adaptor molecule FADD recruits
caspase-8 to the activated receptor. The resulting death-inducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBCELLULAR LOCATION: Type I membrane protein.
DOMALN: Both the cytoplasmic membrane-proximal region and the Cterminal region containing the death domain are involved in the interaction with TRPC4AP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- SIMILARITY: Contains 1 death domain.

SIMILARITY: Contains 1 death domain.
SIMILARITY: Contains 4 TNFR-Cyg repeats.
                                                                                                                                                                                                                      16-OCT-2001 (Rel. 40, Created)

Le Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.

- FUNCTION: Receptor for INFSF6/FASL. The adaptor molecule FADD

recruits caspase-8 to the activated receptor. The resulting death-
inducing signaling complex (DISC) performs caspase-8 proteolytic

activation which initiates the subsequent cascade of caspases

(aspartate-specific cysteine proteases) mediating apoptosis. FAS-
mediated apoptosis may have a role in the induction of peripheral

colerance, in the antigen-stimulated suicide of mature T-cells, or

both (By similarity).

- SUBCELULAR LOCATION: Type I membrane protein.

- SUBCELULAR LOCATION: Type I membrane protein.

- DOMAIN: Contains a death domain involved in the binding of FADD,

and maybe to other cytosolic adaptor proteins.

- SIMILARITY: Contains 1 death domain.
